General Results

"The IDEXX Mycobacterium Paratuberculosis Antibody Test Kit has not been approved by the USDA for the use in small ruminant samples in the US. The same kit, however, is approved in Europe for use in these small ruminant samples. As an American Association of Veterinary Laboratory Diagnosticians (AAVLD) accredited laboratory, Kord Animal Health Diagnostic Laboratory is required to provide validation for each species to be tested. Due to the extremely limited number of small ruminant samples received for this test, this validation cannot be completed at this time and is still ongoing. However, the results provided here have been confirmed with the use of positive and negative controls and may have value in diagnosis."
